Peppers Ghost and Dot to Dot

Photography Task: Pepper's Ghost

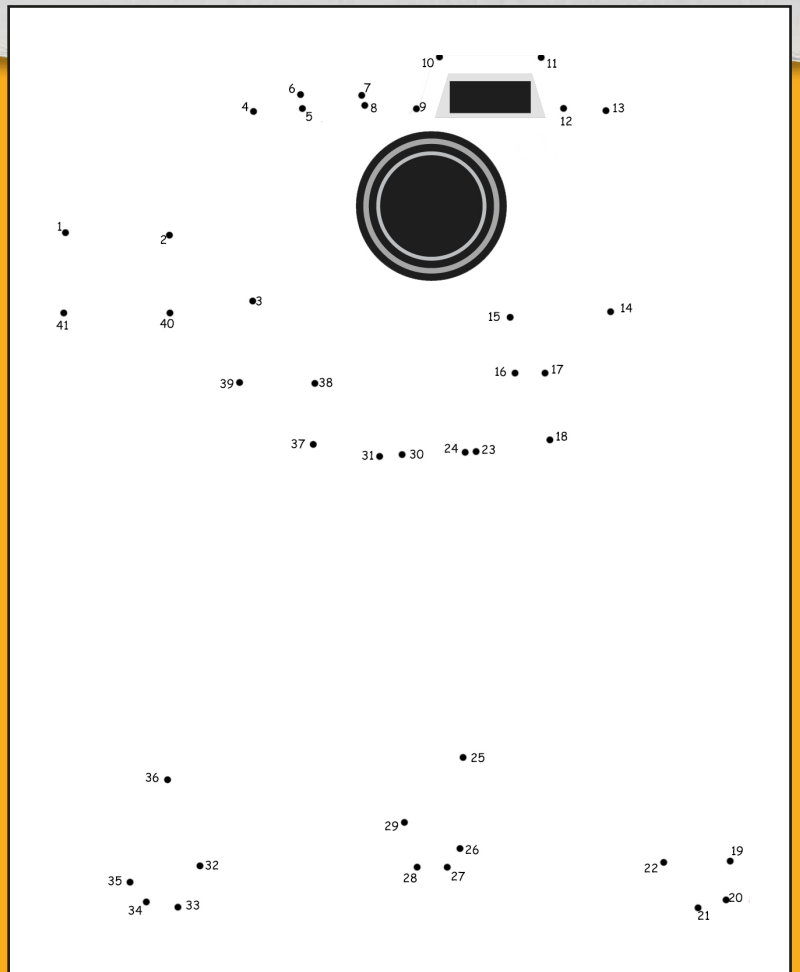

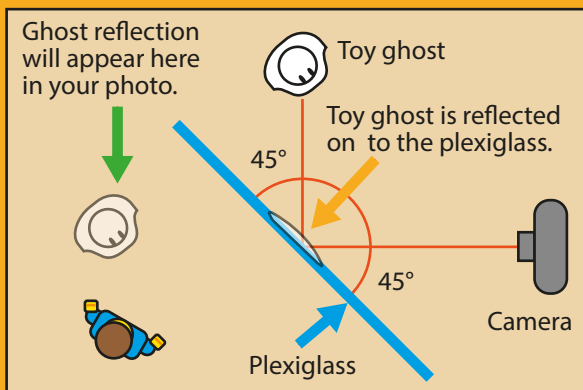

This is a special effects technique for creating transparent, ghostly images. It works by reflecting an object off a sheet of plexiglass.

You'll need a sheet of plexiglass (for example a clear plastic CD case), a camera and object to reflect. In our example it's a toy ghost.

Place your sheet of plexiglass at a 45 degree angle in front of your camera and the object you want to reflect, as shown below.

Dot to Dot Puzzle:

Connect the dots in numerical order to make a picture. Afterwards, you can add your own details and colour in the picture.
